

Teaching With Sustainability in Mind

Background:

As a community, we strive for sustainability. The lessons we provide, the conversations that we have, the opportunities that we make available to our fellows, and the way we design our curricula reflect this. Sustainability is complex, however. There is much to consider and much more that we cannot predict.

How We Used the Work Included in this Center:

Many of the writers and teachers in Studio watched and considered the first version of Karl Fisch's Did You Know video when it was released several years ago. This updated version prompts a great deal of conversation relevant to sustainability within and beyond our community. As we consider content, skills, essential questions, and big ideas, we do so through the lens of sustainability. What really matters? As teachers, what do we hope to sustain? What is truly sustainable? Where are we focusing our energies, comparatively?

Think and Ink:

Please consider and/or discuss those questions yourselves.

How is your thinking shifting?

Please reflect and share on the Think and Ink sheet provided.
